A course should not end when the classes end. **It should continue until your career begins.**

At KodNest, we teach coding with one clear goal: helping you get hired. Every class, project, mock interview, grooming session, and placement drive is connected to one outcome — your first job.

THE METHOD — LEARN, PRACTICE, AND GET READY FOR REAL INTERVIEWS

01 Learn with a clear placement path

You do not just study random topics. You follow a guided path that shows what to learn, why it matters, and how it helps you clear company rounds.

02 Build confidence before the interview

Companies do not expect freshers to know everything. They look for clarity, confidence, problem-solving ability, and the right attitude. We help you build all of it step by step.

03 Practice with real interview preparation

You prepare through mock interviews, project explanations, resume-based questions, aptitude practice, technical grooming, and HR preparation before facing actual companies.

04 Improve after every attempt

Every interview teaches something. Every round gives feedback. Every gap is identified, corrected, and practiced again until you become stronger for the next opportunity.

Placement support continues until your offer is in hand.

With regular company drives, round-wise grooming, AI mock interviews, and transparent placement tracking, KodNest keeps preparing you until you move closer to your first job.

Five levels. You clear one to unlock the next.

Each level ends with something real on your resume. You're never just studying — you're always building proof.

LEVEL 1

1

Foundation

The fear breaks. You learn to think in logic and build your first working things.

YOU BUILD

4 working mini-projects

LEVEL 2

2

Core Coding

You become a coder. Real code, written by you — not copied.

YOU BUILD

A console app you build

LEVEL 3

3

Data & Problem Solving

You clear the two screens every fresher faces: the coding round and the SQL round.

YOU BUILD

A database-backed app

LEVEL 4

4

Full Build

You build one complete application, start to finish, and deploy it.

YOU BUILD

A deployed full project — the centerpiece

LEVEL 5

5

Build with Gen AI

You ship apps on demand, with AI — the skill companies are starting to ask for.

YOU BUILD

A portfolio of AI-built apps

THE CLEVER PART

You don't even choose your track on day one.

The scariest part of starting is "what if I pick wrong?" So we removed it. Everyone does the Foundation month first. Then you choose your direction — with our guidance, based on what you're actually good at. Not a blind bet.

Three tracks. One fits you.

After the Foundation month, you pick your direction — each ends in a real, hireable skill set, with the same placement engine behind it.

01 Java Full Stack with Gen AI

FULL STACK · BACKEND DEVELOPER

Best if you want the widest range of job openings.

Java Spring Boot React SQL Gen AI

02 Python Full Stack with Gen AI

FULL STACK · AI-FOCUSED DEVELOPER

Best if you want product-company and AI-focused roles.

Python FastAPI React SQL Gen AI

03 Data Science with Gen AI

DATA ANALYST · DATA SCIENTIST

Best if you like data, patterns, and finding answers.

Python SQL pandas ML Gen AI

EVERY TRACK INCLUDES

Live classes · Cloud labs · Communication & aptitude · Resume building · AI mock interviews · Proctored assessments · **Drives until placed**

You don't choose on day one

Everyone starts with the same Foundation month. You only pick your track after that — once you've actually written code and know what you're good at. No blind bet, no wrong turn you can't undo.

First, the Foundation.

Everyone starts in the same place — whatever your branch, college, or marks. This is the month the fear of code breaks, before you ever pick a track.

WHAT YOU'LL DO

- › Understand how computers and programs actually work
- › Learn to think in logic, from zero — no coding background needed
- › Write your first real programs, line by line
- › Set up your own GitHub — where developers keep their work
- › Build the habits that get people through to the end

WHAT YOU'LL BUILD — 4 PROJECTS

- ✦ You build 4 real projects in your first month
- ✦ Each one goes live on your own GitHub
- ✦ By the end you have 4 projects to show anyone
- ✦ Your first real proof that you can build

YOUR GITHUB STARTS IN MONTH 1 — NOT AT THE END

Most freshers reach interviews with nothing to show. You won't.

From the first month, every project you build is deployed to your own GitHub. You leave Foundation with 4 projects already online — and you keep adding to it through every level after.

After Foundation you choose

Java Full Stack · Python Full Stack · Data Science — each with Gen AI.

Java Full Stack roadmap.

Best if you want the widest range of job openings. You finish able to build and deploy complete web applications — then build them with AI. Every project here goes live on your GitHub.

2

LEVEL 2 · CORE CODING

Become a coder

Core Java, variables, control flow, object-oriented programming, clean code written by you — not copied.

Data types

Operators

Control constructs

Strings

Arrays

Collections

OOP

[🔗 Build: A complete console application](#)

3

LEVEL 3 · DATA & PROBLEM SOLVING

Clear the rounds that filter freshers out

Data structures & algorithms for the coding test, plus SQL and databases — the two tests almost every company gives a fresher.

DSA

Time complexity

Searching & sorting

SQL

Joins

Database design

[🔗 Build: A database-backed application, end to end](#)

4

LEVEL 4 · FULL BUILD

Build the real thing

Spring Boot backend, REST APIs, a React front end, connecting it all and deploying it live.

Spring Boot

REST APIs

React

Auth

Database integration

Deployment

[🔗 Build: One complete, deployed full-stack web app — your centerpiece](#)

5

LEVEL 5 · BUILD WITH GEN AI

Ship with AI

Building applications using Gen AI tools, AI-assisted development, and shipping working apps on demand.

Gen AI tools

Prompt engineering

AI-assisted dev

LLM APIs

Shipping on demand

[🔗 Build: A portfolio of AI-built apps](#)

ON YOUR RESUME **Java · Spring Boot · React · SQL · Gen AI**

Python Full Stack roadmap.

Best if you want product-company and AI-focused roles. You finish able to build and deploy web apps — and build real AI features into them. Every project here goes live on your GitHub.

2

LEVEL 2 · CORE CODING

Become a coder

Core Python, control flow, object-oriented programming, clean code written by you — not copied.

Data types

Operators

Control constructs

Strings

Lists & dicts

Collections

OOP

[🔗 Build: A complete console application](#)

3

LEVEL 3 · DATA & PROBLEM SOLVING

Clear the rounds that filter freshers out

Data structures & algorithms for the coding test, plus SQL and databases — the two tests almost every company gives a fresher.

DSA

Time complexity

Searching & sorting

SQL

Joins

Database design

[🔗 Build: A database-backed application, end to end](#)

4

LEVEL 4 · FULL BUILD

Build the real thing

FastAPI backend, REST APIs, a React front end, connecting it all and deploying it live.

FastAPI

REST APIs

React

Auth

Database integration

Deployment

[🔗 Build: One complete, deployed full-stack web app — your centerpiece](#)

5

LEVEL 5 · BUILD WITH GEN AI

Ship real AI features

Working with LLMs and Gen AI tooling, adding real AI features to your apps, shipping on demand.

LLMs

Prompt engineering

AI features

Embeddings

Gen AI tooling

[🔗 Build: A portfolio of AI-built apps](#)

ON YOUR RESUME **Python · FastAPI · React · SQL · Gen AI**

Data Science roadmap.

Best if you like data, patterns, and finding answers. You finish able to turn raw, messy data into insight — and build models that predict.

Every project here goes live on your GitHub.

2

LEVEL 2 · CORE CODING

Become a coder

Core Python, control flow, object-oriented programming, clean code written by you — the language all of data science runs on.

Data types

Operators

Control constructs

Strings

Lists & dicts

Collections

OOP

[🔗 Build: A complete console application](#)

3

LEVEL 3 · DATA FOUNDATIONS

Make SQL a strength

SQL as a deep pillar — querying, joins, aggregations, real database work — plus problem solving.

SQL

Joins

Aggregations

Subqueries

Database design

Problem solving

[🔗 Build: A database-backed application, end to end](#)

4

LEVEL 4 · THE DATA SCIENCE STACK

Work with real data

NumPy, pandas, data cleaning, visualisation, statistics and exploratory analysis — the 80% of the job that is understanding data.

NumPy

pandas

Data cleaning

Visualisation

Statistics

EDA

[🔗 Build: A full analysis on a real, messy dataset](#)

5

LEVEL 5 · ML & GEN AI

Build models that predict

Machine learning from first principles, scikit-learn, model building and evaluation — plus Gen AI.

Machine learning

scikit-learn

Model building

Evaluation

Gen AI

[🔗 Build: Trained predictive models + a data project portfolio](#)

ON YOUR RESUME **Python · SQL · pandas · Machine Learning · Gen AI**

Everything you need before facing companies.

Getting placed is not only about learning to code. A fresher must be ready for aptitude tests, communication rounds, resume screening, technical interviews, HR questions, project explanation, and company-specific drives.

That is why every KodNest program includes a complete **Interview Readiness Layer** — preparing you step by step, so you know exactly what to do, how to prepare, and how to perform when real hiring opportunities come.

1

Aptitude Readiness

Build the speed, accuracy and problem-solving to clear aptitude rounds — quantitative, logical reasoning, verbal ability and mock tests on fresher hiring patterns.

2

Communication Readiness

Speak clearly and confidently — self-introduction, project explanation, spoken English, group discussion, JAM and interview communication.

3

Interview Readiness

Face mock interviews before the real ones — technical questions, HR questions, resume-based questions, project explanation and company-style rounds.

4

Profile Readiness

A profile recruiters grasp fast — resume preparation, LinkedIn improvement, GitHub setup, portfolio building and correction to hiring expectations.

5

Project Readiness

Real projects that prove what you can build — and learning to build, present and explain them clearly during interviews.

6

Company Drive Readiness

Round-wise guidance for each drive — grooming sessions, role-specific prep, expected question patterns and last-mile interview support.

7

Placement Support

Continuous support through company drive updates, eligibility guidance, application support, follow-ups and interview preparation — until you move closer to your first job.

The goal is simple

You should not enter placement blindly. You should know what to prepare, where you stand, what to improve, and how to face every hiring round with confidence.

How placement works at KodNest.

Placement here is not run like a local institute, where students depend on manual favour, personal preference, or hidden decisions. Our system is **transparent, rule-based, and preparation-driven** — every student sees where they stand, which drives they're eligible for, what round they're in, and what to do next.

No hidden process. No favouritism.

Access is based on readiness, eligibility, performance and drive requirements — not on someone "pushing your profile." The system tracks your readiness, application status, round progress and next step. You know what's happening, why, and what to do next.

Grooming for every round

Most students fail not because they're weak, but because they're unprepared for the exact round. So we groom for each one — test patterns before aptitude, role-specific concepts before technical, project practice before discussions, and communication, confidence, salary & behavioural prep before HR.

AI-powered mock interviews

Alongside trainer-led grooming, AI mock interviews let you practice technical, HR, resume-based, project and company-specific scenarios in a safe space — showing what you're getting right, where you're stuck, which answers need work, and what to revise before the real thing.

Company-specific preparation

Every company hires differently — some weight aptitude, some coding, some projects, some HR fit. We prepare you to the actual round pattern of the company. Clear aptitude and move to technical? Your next prep is technical grooming, project practice and AI mocks — not generic revision.

Your placement journey — tracked step by step

Drive applied → Eligibility → Round update → Grooming → Mock interview → Interview scheduled →
Result → Next action

No guessing what's happening. Interviews get scary when you feel unprepared — so you get the drive update, understand the requirement, prepare for the round, attend grooming, practice through mocks, and only then face the real interview. That's how placement should work.

The KodNest placement promise

We do not send students into interviews unprepared. We prepare them round by round, company by company, step by step — so every student gets a fair, clear, and serious chance to perform.

2000+ companies. These hire **directly**.

A sample of the companies in our hiring network. Drives run on our platform — and keep coming until you're placed.

Accenture	Cisco	PayPal	Dell Technologies
Mastercard	Ericsson	Nokia	Harman
Zebra Technologies	Akamai	Bosch	Siemens Gamesa
Nutanix	Zoho	Continental	Western Digital
GE Vernova	Broadridge	Micro Focus	Informatica
Razorpay	Amazon	+ 1980 more	Hiring now

Both fully focused. Never hybrid.

Local institutes split themselves between online and offline and do neither well. We run each one pure — built entirely for how you learn.

ONLINE · LEARN ANYWHERE

~~₹26,999~~ **₹21,999**

A pure online program — built for online, not a leftover stream of the offline class.

OFFLINE · 250 SEATS / BATCH

~~₹39,999~~ **₹32,999**

In the room, face-to-face, fully immersed. First come, first served.

Founding Batch pricing — up to ₹7,000 off. Once this batch fills, it's back to standard.
